English

ABOUT ME

I am a passionate and dedicated software developer with a strong foundation in software engineering. Currently, I am pursuing Software Engineering at Agraganya, Eutech, building on my completed Software Development course at VTA Baddegama. My hands-on experience includes developing web applications, managing databases, and integrating frontend and backend technologies. I am eager to contribute my skills to real-world projects and am committed to continuous learning and growth in the field.

PROJECT EXPERIENCE

TECHNOVA E-Commerce Website 2024

- Working with the wider development team.
- Designed and developed Technova E-commerce Website, a fully functional platform for clients and customers, featuring secure payment integration and a seamless user experience.

NEWS App with Mobile Development 2024

- Integrated APIs to fetch and display categorized news content, ensuring a dynamic and user-friendly experience. Implemented push notifications to deliver real-time breaking news alerts, enhancing user engagement and accessibility.

Water Management System in IOT & Lucy 2024

- Working with the wider development team.
- Developed an IoT-based attendance system integrated with a water management system, leveraging smart technology to streamline attendance tracking while optimizing water usage and resource management.

Age Recognition with DeepFace 2024

- Working with the wider development team.
- Developed a Flask web application that uses the DeepFace library to analyze facial images, estimating attributes like age, gender, and emotion. This project showcases skills in Python, Flask, and deep learning.
